2009 NEW MEXICO ENERGY CONSERVATION CODE

SUMMARY OF KEY RESIDENTIAL ENERGY CODE REQUIREMENTS

The 2009 IECC was adopted with amendments in New Mexico and went into effect on **June 28, 2013**. This document summarizes changes to the building envelope-related requirements in the updated code for New Mexico.

CODE CHANGE HIGHLIGHTS

- New Mexico amended the 2009 IECC to incorporate the Home Energy Rating System (HERS) score alternative compliance path. The maximum HERS index scores per climate zone are listed in the table below.
- New Mexico has amended the climate zones and has incorporated Climate Zones 6 and 7 in certain cities. See Table 301.2 of the New Mexico Energy Conservation Code for a list of cities and their corresponding climate zones.
- A RESNET-certified energy rater must confirm the HERS score if used for compliance.

BUILDING ENVELOPE REQUIREMENTS

	2009 IECC CODE SECTION	CHANGE SUMMARY					
CODE PATH		CLIMATE ZONE 3	CLIMATE ZONE 4	CLIMATE ZONE 5	CLIMATE ZONE 6	CLIMATE ZONE 7	
Prescriptive	R402.1.1 – Wood Frame Wall	R-13 / U-0.082	R-13 / U-0.082	R-20 or R-13 + 5 ci / U-0.057	R-20 or R-13 + 5 ci / U-0.057	R-21 / U-0.057	
	R402.1.1 - Ceilings	R-30 / U-0.035	R-38 / U-0.030	R-38 / U-0.030	R-49 / U-0.026	R-49 / U-0.026	
	R402.1.1 – Basement Walls	R-13 or R-5 ci / U-0.091	R-13 or R-10 ci / U-0.059	R-13 or R-10 ci / U-0.059	R-19 or R-15 ci / U-0.050	R-19 or R-15 ci / U-0.050	
	R402.1.1 – Crawl Space Walls	R-13 or R-5 ci / U-0.136	R-13 or R-10 ci / U-0.065	R-13 or R-10 ci / U-0.065	R-13 or R-10 ci / U-0.065	R-13 or R-10 ci / U-0.065	
	R402.1.1 – Fenestration	U-0.50	U-0.35	U-0.35	U-0.35	U-0.35	

DUCT LEAKAGE AIR LEAKAGE

MEASUREMENT	CFM25 / 100 SQ. FT.	CLIMATE ZONE	MEASUREMENT
Rough-in	6	ALL CLIMATE ZONES	7 ACH50
Post-construction	8	ALL CLIMATE ZONES	

MAXIMUM HOME ENERGY RATING SYSTEM (HERS) INDEX

CLIMATE ZONE	MAXIMUM HERS		
3	83		
4–7	89		

Note: All R-values are minimums and U-factors maximums.

ENERGY-EFFICIENT, COST-EFFECTIVE CONSTRUCTION WITH FIBERGLASS AND MINERAL WOOL INSULATION

As code levels advance, **keep informed about innovative practices** to meet or exceed code requirements using cost-effective fiberglass and mineral wool insulation.

The following resources in the table below are just a subset of the many guides available from the **Insulation Institute** to help you achieve new performance requirements with proven approaches.

INSULATION INSTITUTE RESOURCES

Priority Air Sealing Locations for New Homes

GRADE

Air Leakage

As states adopt more stringent energy codes, some builders may experience challenges meeting new mandatory air leakage requirements. Fiberglass and mineral wool insulation is the low-cost solution for homebuilders to meet or surpass code air leakage rate requirements of 3 or 5 air changes per hour depending on climate zone. For homeowners, an airtight building envelope results in energy savings and increased thermal comfort.

Ducts Buried Within Ceiling Insulation Deeply buried ducts in attics is an easy way to lower energy code compliance costs for builders using the simulated energy performance path. Homeowners can benefit from energy savings realized from lower-capacity, lower-cost HVAC systems.

Proper Installation of Insulation Grade I installation delivers superior energy efficiency and is increasingly required by state energy codes. Insulation installation jobs that fail to meet Grade I criteria can mean construction delays due to callbacks, HERS rating penalties, and failed code inspections. Grade I installation is readily achievable by following basic guidelines as recommended by manufacturers. NAIMA offers free online training for installers.

Unvented Attics Using Fiberglass and Mineral Wool Insulation Unvented attics can be constructed by installing fiberglass or mineral wool insulation below the roof deck instead of using more costly materials like spray foam. In addition, fiberglass and mineral wool insulation products are green certified and do not carry recommended occupancy restrictions due to product off-gassing after installation. Starting with the 2018 IRC, this practice is outlined in detail within the code. Homeowners benefit from lower construction costs and the use of a safe product.
