

# SUMMARY OF KEY RESIDENTIAL ENERGY CODE REQUIREMENTS

The 2015 IECC with Georgia specific amendments went into effect on January 1, 2020 and was revised on **January 1, 2023**. This document summarizes changes to the building enveloperelated requirements in the updated code for Georgia.

# CODE CHANGE HIGHLIGHTS

- All insulation to be installed per the manufacturer's instructions and the criteria listed on page 1 of Appendix RA of the 2020 Georgia State Supplements and Amendments.
- R402.1.6 requires values in the prescriptive tables to be met regardless of compliance path.
- Insulation levels in climate zones 2, 3, & 4 have been amended to align at R-13 for the walls and R-38 for the ceilings.
- Cantilevered floors over outside air shall be R-30.

## ► BUILDING ENVELOPE AND DUCT REQUIREMENTS

CODE PATH	2015 IECC CODE SECTION	CHANGE SUMMARY			
		<b>CLIMATE ZONE 2</b>	CLIMATE ZONE 3	CLIMATE ZONE 4	
Prescriptive	R402.1.2 – Wood Frame Wall	R-13 / U-0.084	R-13 / U-0.084	R-13 / U-0.084	
	R402.1.2 - Ceilings	R-38 / U-0.030	R-38 / U-0.030	R-38 / U-0.030	
	R402.1.2 - Basement Walls	N/A / U-0.360	R-13 or 5 ci / U-0.091	R-13 or 10 ci / U-0.059	
	R402.1.2 - Crawl Space Walls	N/A / U-0.477	R-13 or 5 ci / U-0.136	R-13 or 10 ci / U -0.065	
	R402.1.2 - Fenestration	SHGC-0.27 / U-0.35	SHGC-0.27 / U-0.35	SHGC-0.27 / U-0.35

# ENERGY-EFFICIENT, COST-EFFECTIVE CONSTRUCTION WITH FIBERGLASS AND MINERAL WOOL INSULATION

As code levels advance, **keep informed about innovative practices** to meet or exceed code requirements using cost-effective fiberglass and mineral wool insulation.

The following resources in the table below are just a subset of the many guides available from the **Insulation Institute** to help you achieve new performance requirements with proven approaches.

## **INSULATION INSTITUTE RESOURCES**

Priority Air Sealing Locations for New Homes

GRADE

Air Leakage

As states adopt more stringent energy codes, some builders may experience challenges meeting new mandatory air leakage requirements. Fiberglass and mineral wool insulation is the low-cost solution for homebuilders to meet or surpass code air leakage rate requirements of 3 or 5 air changes per hour depending on climate zone. For homeowners, an airtight building envelope results in energy savings and increased thermal comfort.

Ducts Buried Within Ceiling Insulation Deeply buried ducts in attics is an easy way to lower energy code compliance costs for builders using the simulated energy performance path. Homeowners can benefit from energy savings realized from lower-capacity, lower-cost HVAC systems.

Proper Installation of Insulation

Grade I installation delivers superior energy efficiency and is increasingly required by state energy codes. Insulation installation jobs that fail to meet Grade I criteria can mean construction delays due to callbacks, HERS rating penalties, and failed code inspections. Grade I installation is readily achievable by following basic guidelines as recommended by manufacturers. NAIMA offers free online training for installers.

www.grade1insulation.org

Unvented Attics Using Fiberglass and Mineral Wool Insulation Unvented attics can be constructed by installing fiberglass or mineral wool insulation below the roof deck instead of using more costly materials like spray foam. In addition, fiberglass and mineral wool insulation products are green certified and do not carry recommended occupancy restrictions due to product off-gassing after installation. Starting with the 2018 IRC, this practice is outlined in detail within the code. Homeowners benefit from lower construction costs and the use of a safe product.
